

APPLICATION FOR TEMPORARY WATER SERVICE

1. Application for temporary water service shall be submitted, in writing, to the County of Kauai Department of Water (DOW) using the DOW Temporary Water Service from Fire Hydrant application form. Applications for temporary water service shall be submitted at **least 15** working days before water service is needed.
2. DOW will only allow one temporary water service for a single project or event, unless it can be shown that the project or event requires services.
3. Temporary water service will be permitted up to the date requested by the party that applies for the temporary water service (applicant), or a **maximum of six (6) months**. Unless a request for an extension of time to continue the use of the temporary water service is submitted in writing to the County of Kauai Department of Water (DOW) using the DOW Temporary Water Service from Fire Hydrant application form ***no later than 10 working days prior to the expiration date*** of the service, the temporary water service will be terminated. The written request for extension of time shall provide a detailed explanation justifying the extended time period. The applicant will be responsible to confirm that DOW has received the extension letter.
4. The applicant may terminate temporary water meter service before the termination date by submitting a request, in writing, to DOW. The **written termination request must be received 10 working days prior to the termination date requested by the applicant.**

Meter Installation and Removal

1. Installation and removal of temporary meters, opening and closing of water system valves shall be performed by authorized DOW personnel. The applicant shall provide, install, maintain and operate a valve after the meter for the applicant's use to control flow.
2. The applicant shall not remove or relocate temporary meters. Should the temporary meter be removed or relocated from the authorized location by anyone except authorized DOW personnel, the water service will be automatically terminated and the meter removed.
3. Any damages to the temporary meter, hydrant or surrounding area requiring repairs or corrections will be charged to and paid by the applicant.

Cross Connection and Backflow Protection

1. The applicant shall provide, install (**prior to installation of temporary fire hydrant meter**), maintain and operate an approved reduce pressure principal backflow prevention assembly (BFPA) installed on the applicant's side of the meter with a current certification of test results for review and approval. DOW's "Water System Standards" requires the installation of a BFPA for all construction activities, irrigation activities and other activities that have the potential to contamination the DOW's potable water supply.
2. Applicant shall install a Reduced Pressure Principal Backflow Prevention Assembly that is approved by the University of Southern California's foundation for Cross-connection Control and Hydraulic Research (USC).

3. Applicant shall hire a certified “BFPA” tester who must test the “BFPA” and provide a certification of test results to the DOW for review and acceptance. Applicant shall contact and coordinate with DOW’s operation’s personnel to allow water use for testing of the “BFPA”.
4. Upon completion of the requirements above the DOW shall allow the water usage from the temporary water meter service from the fire hydrant.
5. The BFPA shall be tested every six months by a certified backflow prevention tester. Results shall be submitted to the DOW.
